- Deep Dive into python Libraries
- Web development udemy

PROJECT

VTU CGPA Calculator Website Visitsite
The Concepts used are HTML, CSS and JAVASCRIPT.
- The website helps the students of VTU to calculate their SGPA as well as CGPA for 3 different schemes.

Movie DataBase Management Application click here
The Concepts used are JAVA (Java Swings and JDBC), MySQL.
- This Java application is used to store the movie details in the database and access those details using MySQL as a backend and java swings as a frontend.

Voice Assistant using Python click here
The concept used is Python Jarvis.
- Developed a voice assistant inspired by Jarvis, enhancing my skills in natural language processing and voice recognition technologies.
